Passive Display Enhancements

Touch International offers a wide range of films designed to enhance the visual clarity of your display. Used alone or in combination, these films can reduce glare or reflection for high sunlight readability or allow for an easy clean up with an anti-smudge surface.

Anti-Reflective (AR) Film

- A Smooth Textured Film Coated with an Anti-Reflective Coating that Contains an Anti-Smudge Overcoat
- Dramatically Reduces Surface Reflections, Improving the Brightness and Contrast Ratio to 3x Without Actually Making the Display Brighter
- Applied Either Directly in the Frame or under the Frame

Anti-Glare (AG) Film

- A Matte Textured (aka Anti-Glare) Film is Coated with an Anti-Reflective Coating that has an Anti-Smudge Overcoat
- Softens Direct Light Source Images in Reflection (Customizable)
- Enhance the Scratch Resistance of the Display
- Chemically and Mechanically Etched (Applies Only to Glass)
- Applied Either Directly in the Frame or under the Frame

Anti-Smudge (AS) Film

- Component of the Other Two films Rather than a Stand Alone Product
- Smudge Resistant
- Easy to Clean Surface
